

DILLON

Mechanical Force Gauges

Dillon Model X Mechanical Force Gauges

Measure tension, compression, and push/pull.

Model X-C with compression calibration

Model X-C comes in eleven capacities ranging from 25 lb to 50,000 lb or 10 to 20,000 kg. All feature accuracy of $\pm 1\%$ of full capacity, except the 25,000 and 50,000 lb (10,000 and 20,000 kg) capacity instruments which are accurate to $\pm 2\%$ of full capacity.

Load is applied against a hardened ball which rotates to maintain vertical alignment as pressure increases. The ball is held in place with a spring clip. The threaded mounting hole is located opposite the loading ball in the bottom of the beam.

Model X-C is available in pound, kilogram or Newton capacities.

Options include:

- Maximum load pointer which remains at peak load until manually reset.
- Zero position on dial may be factory positioned at 12, 3, 6, or 9 o'clock. Standard position is at 12 o'clock.
- Shockless dial indicator for installations involving the sudden application or release of force. (Maximum pointer cannot be supplied with shockless dial indicator.)

Model X-ST with tension calibration

Dillon offers the Model X-ST in nine capacities from 25 lb to 10,000 lb or 10 kg to 5,000 kg. Accuracy is $\pm 1\%$ of full range. (Note: For applications requiring capacities beyond 10,000 lb or 5,000 kg in tension, consider the Dillon Dynamometer).

Tension Force Gauges in capacities through 2,000 lb (1,000 kg) are supplied with two rod-end connectors. 5,000 and 10,000 lb (2,000 and 5,000 kg) capacities are equipped with convenient shackles and pins.

Calibration is available in pounds, kilograms or Newtons.

Options include:

- Maximum load pointer.
- Shockless dial indicator.
- Zero position on dial at 12, 3, 6, or 9 o'clock. Standard position is at 12 o'clock.

Model X-PP with compression/tension calibration

Force gauges calibrated in push-pull are available in seven capacities in pounds ranging from 50-0-50 lb up to and including 5,000-0-5,000 lb and four metric capacities from 50-0-50 to 1,000-0-1,000 kg. Newton calibration is also available. Accuracy is $\pm 2\%$ of maximum dial reading (based upon total capacity of both compression and tension scales).

Model X-PP gauges in capacities up to and including 1,000-0-1,000 lb or 500-0-500 kg are supplied with a set of self-aligning spherical rod-end connectors for tension loading. Force is applied to connectors through a hardened steel pin which must be slip fit in connector holes.

2,500-0-2,500 and 5,000-0-5,000 lb and 1,000-0-1,000 kg capacity gauges are equipped with two shackle adapters, shackles and pins. Shackles must be removed when compression load is involved. Force is then applied against shackle pins in a suitable test setup.

All push-pull gauges are supplied with a compression-loading spherical ball fitting for compression loading.

Options include:

- Shockless dial.
- Zero position on dial at 12, 3, 6, or 9 o'clock. Standard position is at 12 o'clock.

Model X Force-Gauge parts identification

1. Deflection beam
2. Dial indicator with zero at standard 12:00 position.
3. Bezel
4. Maximum load pointer (optional)
5. Pressure button
6. Slanted Anvil
7. Dial indicator plunger
8. Anvil set screw
9. Mounting bracket for dial indicator
10. Screws for mounting bracket
11. Bezel-locking screw
12. Loading ball
13. Spring retainer clip

Principle of operation

A D-shaped deflection beam is the heart of the Dillon Force Gauge. Machined to close tolerances, beams are heat treated to develop optimum strength and spring characteristics. High-strength aluminum is used in Model X instruments through 500 lb (200 kg). Ranges above this are fabricated from aircraft-quality alloy steel.

A precision dial indicator is mounted at the null point of the deflection beam. The indicator plunger rests against a slanted anvil at the open end of the beam, as shown in the photo. Under compression loads, the two halves of the beam tend to close. Tension force causes them to move apart. This action pushes the plunger inward, as determined by the slant of the anvil. Readings produced on the dial are in direct relation to applied load. The pointer revolves 360° clockwise under compression or tension forces. Push-pull gauges read half scale (180°) clockwise in compression, and counterclockwise, 180° from center zero under tension loads.

Low beam deflection

When measured across the center of top- and bottom-loading holes, the approximate beam deflection is as follows:

25 to 250-lb capacity (10 to 100 kg)	0.019"
500-lb capacity (200 kg)	0.016"
1,000-lb capacity (500 kg)	0.018"
2,000-lb capacity (1000 kg)	0.011"
5- and 10,000-lb capacity (2 and 5,000 kg)	0.010"
25- and 50,000-lb capacity (10 and 20,000 kg)	0.022"

Overload rating

Accidental overloads up to 30% of capacity can be safely sustained without injury to the dial indicator or deflection beam. All capacities feature a 5:1 design safety factor.

General information

- To reset zero, loosen knurled bezel-locking screw and rotate dial.
- Dillon Model X Force Gauges may be mounted horizontally, vertically, or flat.
- The baked-enamel finish resists corrosion and rust.
- Operating temperature up to 120° F.

Dillon Model U Force Gauges

Slim line design for added versatility.

The Model U Force Gauge is an accurate ($\pm 1\%$ of full range) mechanical compression-measurement instrument. Its slim-line design has repeatedly proven valuable in installations where space is at a premium.

The versatility of this simple instrument is demonstrated by the fact that it can be used as a hand-held device, permanently mounted on a flat surface plate, or used in test fixtures.

How the U Force Gauge Works

The Dillon Model U Force Gauge employs a deflection beam machined from aircraft quality alloy steel and heat treated to develop optimum strength and spring characteristics. A precision dial indicator is mounted at the null point of this beam.

1. Deflection beam
2. Indicator with zero at 6:00 position
3. Pressure fitting
4. Maximum pointer (optional)
5. Indicator plunger
6. Slanted anvil

Compression force is normally applied against a single pressure fitting mounted on the upper half of the beam. (For accurate calibration, designate the type of pressure fitting you wish to use with the U Force Gauge. They are of four types: domed, cupped, flat, or a flat nylon insert. Flat bottom gauges require only one fitting. Recessed bottom gauges have top and bottom fittings).

When load is exerted, the beam moves downward causing a slanted anvil on the free end to push against the indicator plunger. The indicator reading is a direct representation of the applied load.

Dillon offers a capacity for every job

U Force Gauges are available for measurement in pounds, kilograms or newtons. There are 9-pound capacities ranging from 25 x .25 to 10,000 x 100 lb. The 7 kilogram capacities range from 10 x .1 to 5,000 x 50 kg.

On light capacity models with capacities from 25 to 250 lb or 10 to 100 kg, you can choose between flat bottom and recessed design.

*The Model "U" with **recessed** deflection beam is designed for applications where space is limited. It includes compression-loading fittings for top and bottom.*

Dillon also offers high-capacity gauges with lb capacities from 500 to 10,000 lb and metric capacities from 500 to 5000 kg. High-capacity gauges all have flat-bottom design, and each includes one pressure fitting of your choice.

Options

Zero position—The zero position on the indicator dial can be factory positioned at 12 o'clock, 3 o'clock, 6 o'clock, or 9 o'clock. The standard position is the 6 o'clock position.

Maximum pointer—Model U Force Gauges can include a maximum pointer which remains at peak load until it is reset.

Shockless dial indicator—Offers added protection in applications where force is applied or released rapidly.

Dial orientation—The dial indicator can be factory positioned at 0° (standard), 90°, 180°, 270° clockwise. Photos on this page show standard dial orientation.

Note: maximum pointer and shockless dial indicator cannot be offered on the same unit.

*Recessed bottom optional on all low-range models only

Also available in newton calibration

Select the right pressure fittings

Load is applied to the Dillon Model U Force Gauge through hardened pressure fittings. Each recessed-bottom gauge includes two fittings which you may choose from the following list. Each flat-bottom gauge includes one fitting which you may choose from the following list.

For 25 to 250 lb (10 to 100 kg) capacity gauges:

- Part No. 30160-0011 flat surface
- Part No. 30156-0017 cupped surface
- Part No. 30159-0014 domed surface
- Part No. 30158-0015 nylon insert

For 500 lb, 1000 lb, and 500 kg capacity gauges:

- Part No. 30483-0011 domed surface
- Part No. 30378-0019 cupped surface
- Part No. 30484-0010 flat surface

For 2,000 to 10,000 lb (1,000 to 5,000 kg) capacity gauges:

- Part No. 30434-0011 domed surface pressure fitting
- Part No. 30125-0015 cupped surface pressure fitting
- Part No. 30475-0011 flat surface
